Open models have an adjustable shaft design on most manually operated models that permits back-of-panel or bench mounting. Cased models are available in "C" styles enclose only the coil, while "CT" models provide protective housing for both coil and terminal board. Portable cord and plug models are cased plug-in models that have a ventilated steel case, line cord, receptacle, illuminated on/off switch and fuse.

TransERA Encapsulated Transformers

TransERA Encapsulated Transformers give you added advantages over un-encapsulated transformers. They give a reduced winding temperature differential due to heat transfer capability of epoxy. There is a greater VA/Volume ratio resulting in cooler and/or smaller transformers. Insulation reliability is increased due to use of epoxy in place of tape/paper insulation. Encapsulated transformers offer superior humidity/moisture resistance and an ease of handling during manufacture. Also there is an improved product appearance when you use an encapsulated transformer.

Features:
- Vacuum sealed
- Two-chamber coil

TRIAD SPLIT-PACK® POWER TRANSFORMERS

The Triad Split-Pack® split bobbin transformer is an extremely versatile tool for PC board applications. Split-Pack® transformers are nonconcentrically wound with primaries and secondaries side-by-side. Unlike the secondary on-top-of-primary designs of standard PC board transformers, the split-bobbin winding and low capacitive coupling eliminate costly electrostatic shielding.

Features:
- Primary: 115/230VAC 50/60Hz
- Hi-pot tested at 2,500VRMS
- Class B UL recognized
- PC terminal pin spacing for accurate placement

Series connections: 230VAC
Primary: Input 1 and 4, connect 2 and 3
Secondary: output 5 and 8, connect 6 and 7
Parallel connections: 115VAC
Primary: Input 1 and 2, connect 1 and 3, 2 and 4
Secondary: output 5 and 6, connect 5 and 7, 6 and 8

TRIAD ISOLATION POWER TRANSFORMERS

For isolating equipment from direct connection to the power line. The primary and secondary are nonconcentric precision wound on separate arbors, assembled on a laminate core side by side separated by insulation. This prevents electrical connection, under normal or overload conditions, between the primary and secondary windings.

Specifications:

- Secondary voltage: ±5%
- Leakage current from primary to secondary is rated at less than 50μA and is typically measured at less than 10μA
- Hi-pot tested at 1500V
- Units with "M" suffix have 2-wire 6' cord, plug and socket.
- Line cord, plug and receptacle are UL listed and verified to meet federal specifications

§ = Split winding * w/ Ground wire

FLT SERIES FILTER MODULES

When used with the recommended external capacitors, this family of filters significantly reduces both the common-mode and differential emissions injected back to the power source.

Features:
- UL approved
- A low-ESR input capacitor is recommended at the input to the DC-DC to provide a low source impedance and additional noise attenuation.
- Compatible with most modern switching DC-DC converters
- Provides both common-mode and differential-mode filtering

For quantities of 50 and up, call for quote.

VISHAY FunctionPAK™ DC-DC Converters

SINGLE OUTPUT FULLY INTEGRATED DC-DC CONVERTERS

FX5545 Series

Simplified LAB Assembly Configuration for all Models

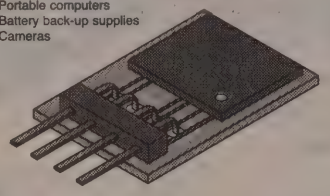
The DC/DC converter is a programmable topology synchronized Buck or Boost converter for today's continuous changing electronic market. The DC/DC converter provides flexibility of utilizing various battery configurations and chemistries such as NiCd, NiMH, or Li+ with input voltage range of 2.5V to 6V. An additional flexibility is provided with topology programmability to power multiple loads such as power amplifiers, microcontrollers, or baseband logic IC's. For ultra-high efficiency, converters are designed to operate in synchronous rectified PWM mode under full load while transforming into externally controlled pulse-skipping mode (PSM) under light load. The DC/DC converter is available in 20-ports BGA package for production. Convenient 8-pin plug-in modules are available for prototyping. In order to satisfy the stringent ambient temperature requirements, the DC/DC converter is designed to handle the industrial temperature range of -40°C to +85°C, with no cooling or derating.

Features:

- Specially designed for prototyping in LABs with limited assembly equipment
- Fully integrated DC/DC converter
- No external components required
- Buck and Boost configurations
- High efficiency over large load range 100% duty cycle
- Power density - more than 380W/inch³
- 1µA shutdown current
- 2.5V to 6V input range (1Li+ and 3-cell NiCd or NiMH cells)
- 0.9V to 6V output voltage
- Programmable PWM/PSM controls
- Low output ripple
- 1260 Temperature range: -40°C to +85°C
- Standard socket construction or plug-in for prototype (use BGA for production)
- Output power 10W
- Maximum continuous current 3A

Applications:

- Cordless phones, PDAs and others
- Supply voltage source for low-voltage chip sets
- Point of Load (POL) applications such as drivers for FPGA's, microprocessors, DSP's, amplifiers, etc.
- Portable computers
- Battery back-up supplies
- Cameras



What is FunctionPAK™?

FunctionPAK is the generic name of the multichip module (MCM) product lines offered by Vishay. The name was chosen to emphasize two things:

1. The products offered are complete circuit functions, not partial solutions. DC/DC converters offered by many other integrated circuit (IC) manufacturers are silicon chips that provide the base circuit application. However, the end user must then select the approximately 18 other components that surround the silicon device in order to make it a complete circuit solution. The selection of those components and the board layout affect the resultant performance, so that the efficiency defined by the IC manufacturer is not the same as the efficiency achieved in the customer's complete circuit. When purchased as a complete function, a single package contains all circuit components and is fully tested with all circuit performance parameters defined exactly as used in the customer's system.
2. The products are offered as complete circuits in monolithic packages with all the resultant savings in design time, purchasing, stocking, assembly, board space, testing, etc. It is worth noting that many applications are developed by digital engineers who prefer to leave integration to the analog engineers and appreciate the opportunity to obtain a complete circuit in one package.

PIN DESCRIPTION	
PIN	DESCRIPTION
SD	Logic low on SD pin shuts down the FunctionPAK completely and decreases current consumption to less than 1µA.
PWM/PSM	Logic high =PWM mode, logic low =PSM mode. In PSM mode synchronous rectification is disabled.
SYNC	Externally controlled synchronization signal. Logic high to low transition forces the clock synchronization. If not used the pin must be connected to Vin or logic high.
Vin	Input supply voltage
Vout	Output voltage
GND	Ground
Rext.	Included inside the package for all fixed output voltage converters. To be added externally for all self-selected output voltages.

MCR HARDWIRED SERIES - POWER LINE CONDITIONING WITH VOLTAGE REGULATION

The MCR Hardwired Series provides excellent noise filtering and surge suppression to protect connected equipment from damage, degradation, or misoperation. Combined with the excellent voltage regulation inherent to Sola/Hevi-Duty's patented ferroresonant design, the MCR can increase the actual Mean Time Before Failure (MTBF) of protected equipment. The MCR is a perfect choice where dirty power, caused by impulses, swell, sags, brownouts, and waveform distortion can lead to costly downtime because of damaged equipment.

Features:

- Line regulation: +/- 3%
- Noise attenuation
- 120dB common mode
- 60 dB transverse mode
- Harmonic filtering
- Galvanic isolation
- Surge suppression tested to ANSI/IEEE C63.41 Class A & B Waveform: <10 V let through typical

Features:

- **Superior voltage regulation +/- 1%**
- Harmonic filtering
- Hardwired
- Galvanic isolation
- Acts as a step-up/step-down transformer
- 25-year typical MTBF

SIMPSON Digital Panel Meters and Test Equipment

GIMA POWER METERING SYSTEM

Features:
- Four Model Types Designed to fit a Wide Range of Applications
- One Meter to Measure All Your Values
- DIN (96 x 96mm) Case Needing Only 2.80" (71mm) Behind the Panel
- Easy Installation - Software Detection/Correction of Wiring Errors
- Wide Backlit LCD Display for Easy Viewing
- Easy and Safe to Use - Four Keys Select All Parameters

A three-phase terminal style current transformer can be used with all the GIMA three-phase meters. Simpson's three-phase current transformer can be used to monitor AC current when the current level is too high for the meter. The current transformer is equipped with terminals to permit easy connection to the GIMA units. These terminals are #8-32 brass studs and come with a flatwasher, lockwasher, and a regular nut (leads are not provided).
A modbus module adds multi-drop serial communications to any GIMA meter. The device uses a high speed microprocessor to extract information from the meter and interface to an industry standard modbus system.
An Analog output module adds four DC 2-20 mA analog to any GIMA meter. All outputs are isolated from the metering elements to provide safe connection to external systems.

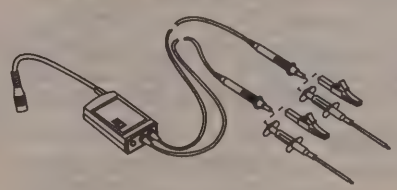
DIFFERENTIAL OSCILLOSCOPE PROBE

Pomona Model 6731 differential voltage probe allows users to safely make floating high voltage measurements while using general purpose oscilloscopes. Using a built-in differential amplifier, the floating signal is converted and scaled to a low-voltage signal referenced to earth ground. The probe can be used on circuits associated with electronic high-power converters, motor speed controls, switching mode power supplies, and other high voltage circuits requiring isolation.



Features:
- Switchable attenuation of 20:1 and 200
- High impedance to ground for both positive and negative side of the balanced input
- Maximum differential voltage up to 1000V
- Bandwidth from DC to 20 MHz (-3 dB)
- Risetime: 17.5 ns
- The probe input uses shrouded banana test probe tip
- The output to the oscilloscope is made with a BNC cable with a safety insulated BNC male connector

Included with the 6731:
- Large jaw alligator clips (one red, one black)
- Pin-Grabber test clips (one red, one black)
- 9V Alkaline battery

PLATO TIP CARE

Tip Tin

Plato's LEAD FREE Tip Tinner TT-95 is a fast, efficient, and safe means of re-tinning tips. This thermally-stable compound is residue free and ESD and environmentally safe. A well tinned soldering tip improves operator performance and satisfaction. Plato's Tip-Tin provides improved cleaning and re-tinning of highly oxidized soldering iron tips safely and efficiently.

- Lead Free
- ESD Safe
- Easy to Use
- Fast Response
- Environmentally Safe
- Residue Free

Tip Polishing Bar

The inexpensive Plato® Polishing Bar restores detinned tips for additional service. Normally, detinned tips (those unable to hold solder) are discarded. If the tips are not pitted or worn, buffing with the Plato® Polishing Bar will clean the tips and restore new life.

Desoldering Tip Cleaning Tool

This handy maintenance tool is used to remove unwanted solder and flux "build-up" from desoldering tip ID'S and from solder collector paths. Just select the proper diameter rod from the Plato® tool and push out any unwanted loose particles or solder from the desolder tip or collector path. Proper daily maintenance of all desoldering equipment minimizes premature tip clogging and will ensure improved performance.

TECHSPRAY STATIC DISSIPATIVE BRUSHES

The dissipative brushes have a surface resistivity of 10^8 - 10^9 ohms, which makes them an excellent addition to any ESD program. Each brush is made with a revolutionary, non-sloughing, static dissipative material to prevent any static generation even when cleaning with a dry brush. For your safety, please use these brushes with a wrist strap or other mechanism to provide a good path to ground.
